PROFESSIONAL SUMMARY

Manufacturing Engineering Technology graduate from Tennessee Tech with a Mechatronics concentration and hands-on experience designing automation and control systems. Proficient in PLC programming, embedded systems, sensors and controls, and CAD modeling. Seeking an entry-level automation or controls engineering role in a manufacturing environment.

EDUCATION

Tennessee Technological University <i>Bachelor of Science in Manufacturing Engineering Technology, Mechatronics Concentration.</i> Relevant Coursework: Mechatronics, Industrial Electronics and PLCs, CAD, Machine Automation	Cookeville, TN May 2026
---	----------------------------

EXPERIENCE

Crew Member <i>McDonald's</i> Maintained operational and quality standards in a high-pace, team-based service environment	11/2025 – 04/2026 Cookeville, TN
Receiver <i>Academy Sports and Outdoors</i> - Managed inbound freight, inventory organization, and product distribution in a high-volume environment - Operated material handling equipment safely and efficiently - Maintained inventory accuracy and supported logistics operations under tight timelines	07/2024 – 10/2025 Cookeville, TN
Garden Shop Sales Associate <i>Lowe's</i> - Assisted with inventory movement, stock replenishment, and outdoor product organization - Operated forklifts and material handling equipment safely while loading landscaping materials	Summer 2022 – Summer 2023 Spring Hill, TN

PROJECTS

Senior Capstone Project: Cyclist Safety Alert System

- Designed and developed an embedded control system providing brake-light-style visual alerts to motorists when vehicles approach cyclists at unsafe speeds in low-light conditions
- Programmed sensor-driven control logic using embedded systems to trigger real-time proximity alerts, applying mechatronics principles across hardware and software integration
- Built and tested prototype hardware using CAD modeling and embedded control concepts

CAD and Automation Projects

- Built 3D models and assemblies using SolidWorks and Fusion 360
- Programmed Arduino and Raspberry Pi systems for automation and control applications
- Applied CNC machining and manufacturing principles in laboratory environments

SKILLS

Programming and Controls: PLC Programming, Arduino, Raspberry Pi, Embedded Systems, Sensors and Controls, C++
Software: SolidWorks, AutoCAD, Fusion 360, KiCAD, Arduino IDE, RoboGuide
Manufacturing: CNC Machining, Manufacturing Processes, Inventory Management, Forklift Operation (Certified)
